

Rockwool® Products

Rockwool® products are insulation materials which are resistant up to 750°C and produced in various forms (bulk, board, especially faced, wired mat, etc.). They are mainly preferred in back-up insulation applications and widely used in industrial furnaces, domestic appliances, construction, petrochemical and marine industries as they are cost-effective.

Rockwool® Marine Firebatts 100 and 130 (Searox SL 620 and 640)

Rockwool® Marine Firebatts 100 and 130 are products of semi-flexible structure in the form of a board. If required, both materials can be provided as one face covered either with aluminium foil or glass fiber cloth.

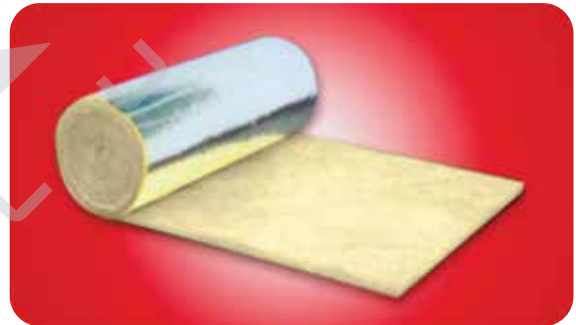

In general, it is used as fireproof material in the shipboard and vessel divisions of "Class-A" certificated structures. Furthermore, the product is successfully used in the industrial furnaces, home appliances and various industrial insulation applications.

Rockwool® Marine Batts 32 RL (Searox SL 720 Alu)

Rockwool® Marine Batts 32 RL is a soft and flexible product in a mat form. The external surface of the product is reinforced by facing with aluminium foil.

The material is mostly used for heat insulation on the marine vessels.

Rockwool® Marine Lamella Mat 32 (Searox LM 900 Alu)

Marine Lamella Mat 32 is formed with rockwool layers lined up side by side and it tends as one side is covered with aluminium foil.

It is widely used at pipe insulation and deck ventilating systems.

Rockwool® Marine Wired Mat (Searox WM)

The product is in matt form and has a soft and flexible structure, its one side is covered with 1" galvanized wire mesh. If requested, it can also be produced by facing with aluminium foil or glass fibre cloth. In general, Rockwool® Marine Wired Mat preferred for insulation of the piping and equipment up to the temperature of 750 °C, is also used in the "Class-A" certificated structures.
