

Core and Mould Adhesive “CFX - 27 H”

Description

CFX-27 H is gray and self-hardening core and mould adhesive which has superior adhesion capability at high temperatures.

CFX-27 H may also be used as sealing material for the moulds bonded with sodium silicate and furan resin.

Since the product is offered in plastic tube packing, it is easy to apply to many surfaces. Adhesion will start in a short time and desired durability will realize after the tube is squeezed.

Application

Cores after jointing by CFX-27 H can be set in about 5 minutes. Full hardening will be achieved in 45 minutes.

Packaging

17 kg/carton, tubes 500 gr.
